Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology))

Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology))

Throughout the world, there is an increasing interest in ecological design of buildings, and natural ventilation has proved to be the most efficient low-energy cooling technique. Its practical application, however, is hindered by the lack of information on the complex relationship between the building and its urban environment. In this book, a team of experts provide first-hand information and tools on the efficient use of natural ventilation in urban buildings. Key design principles are explained, enabling readers to decide on the best solution for natural ventilation of buildings, taking into account climate and urban context. In the initial sketches, architects need answers to open problems such as 'what kind of solution to adopt' and 'how to modify existing strategies to exploit the potential of the site'. This book formalizes the multi-criteria analysis of candidate solutions based on quantitative and qualitative estimation of the driving forces (wind and buoyancy), as well as of the barriers induced by the urban environment (wind speed reduction, noise and pollution) and gives a methodology for optimal design of openings. The book is accompanied by a FREE CD, containing software for assessing the potential of a given site, estimating wind speed and dimensioning the openings for natural ventilation. The methodologies and tools are tested, self-contained and user friendly. About the editors The editors, Cristian Ghiaus and Francis Allard, are affiliated with the University of La Rochelle, France. The authors and reviewers combine expertise from universities, research institutions and industry in Belgium, France, Great Britain, Greece, Portugal and Switzerland.

From reader reviews:

Marina Rutt:

With other case, little persons like to read book Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)). You can choose the best book if you'd prefer reading a book. Provided that we know about how is important the book Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)). You can add know-how and of course you can around the world by just a book. Absolutely right, due to the fact from book you can recognize everything! From your country until finally foreign or abroad you may be known. About simple thing until wonderful thing you are able to know that. In this era, you can open a book or even searching by internet product. It is called e-book. You need to use it when you feel bored stiff to go to the library. Let's learn.

Ilene Venne:

Playing with family inside a park, coming to see the marine world or hanging out with good friends is thing that usually you will have done when you have spare time, then why you don't try factor that really opposite from that. 1 activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)), you can enjoy both. It is good combination right, you still need to miss it? What kind of hang type is it? Oh seriously its mind hangout folks. What? Still don't have it, oh come on its named reading friends.

James Kostka:

This Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)) is fresh way for you who has curiosity to look for some information because it relief your hunger info. Getting deeper you on it getting knowledge more you know or else you who still having bit of digest in reading this Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)) can be the light food for you because the information inside this book is easy to get simply by anyone. These books build itself in the form and that is reachable by anyone, yes I mean in the e-book web form. People who think that in publication form make them feel tired even dizzy this publication is the answer. So you cannot find any in reading a e-book especially this one. You can find actually looking for. It should be here for an individual. So , don't miss it! Just read this e-book sort for your better life and knowledge.

Linda Mays:

What is your hobby? Have you heard that will question when you got learners? We believe that that issue was given by teacher to their students. Many kinds of hobby, All people has different hobby. And also you know that little person similar to reading or as looking at become their hobby. You need to know that reading

is very important and also book as to be the thing. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You get good news or update regarding something by book. Amount types of books that can you choose to use be your object. One of them is niagra Natural Ventilation in the Urban Environment: Assessment and Design (BEST (Buildings Energy and Solar Technology)).
