Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies)

Accurate measurement at the nano-scale - nanometrology - is a critical tool for advanced nanotechnology applications, where exact quantities and engineering precision are beyond the capabilities of traditional measuring techniques and instruments. Scanning Probe Microscopy (SPM) builds up a picture of a specimen by scanning with a physical probe; unrestrained by the wavelength of light or electrons, the resolution obtainable with this technique can resolve atoms. SPM instruments include the Atomic Force Microscope (AFM) and Scanning Tunneling Microscope (STM).

Despite tremendous advances in Scanning Probe Microscopy (SPM) over the last twenty years, its potential as a quantitative measurement tool have not been fully realized, due to challenges such as the complexity of tip/sample interaction. In this book, Petr Klapetek uses the latest research to unlock SPM as a toolkit for nanometrology in fields as diverse as nanotechnology, surface physics, materials engineering, thin film optics, and life sciences. Klapetek's considerable experience of Quantitative Data Processing, using software tools, enables him to not only explain the microscopy techniques, but also to demystify the analysis and interpretation of the data collected.

In addition to the essential principles and theory of SPM metrology, Klapetek provides readers with a number of worked examples to demonstrate typical ways of solving problems in SPM analysis. Source data for the examples as well as most of the described open source software tools are available on a companion website.

- Unlocks the use of Scanning Probe Microscopy (SPM) for nanometrology applications in engineering, physics, life science and earth science settings.
- Provides practical guidance regarding areas of difficulty such as tip/sample interaction and calibration - making metrology applications achievable.
- Gives guidance on data collection and interpretation, including the use of software-based modeling (using applications that are mostly freely available).

From reader reviews:

Donald Rose:

Do you have favorite book? For those who have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each book has different aim or perhaps goal; it means that publication has different type. Some people experience enjoy to spend their the perfect time to read a book. They are reading whatever they have because their hobby is usually reading a book. What about the person who don't like looking at a book? Sometime, man feel need book whenever they found difficult problem as well as exercise. Well, probably you will need this Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies).

Suzanne Jensen:

Beside this Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) in your phone, it may give you a way to get nearer to the new knowledge or information. The information and the knowledge you are going to get here is fresh from oven so don't end up being worry if you feel like an older people live in narrow commune. It is good thing to have Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) because this book offers to you personally readable information. Do you occasionally have book but you don't get what it's exactly about. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable blend here cannot be questionable, like treasuring beautiful island. So do you still want to miss that? Find this book and also read it from today!

William Quesada:

Within this era which is the greater person or who has ability to do something more are more precious than other. Do you want to become one of it? It is just simple way to have that. What you are related is just spending your time very little but quite enough to possess a look at some books. One of many books in the top collection in your reading list is definitely Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies). This book that is qualified as The Hungry Inclines can get you closer in turning out to be precious person. By looking way up and review this publication you can get many advantages.

Jessie Davis:

You can get this Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) by look at the bookstore or Mall. Just simply viewing or reviewing it might to be your solve trouble if you get difficulties to your knowledge. Kinds of this book are various. Not only through written or printed but in addition can you enjoy this book through e-book. In the modern era such as now, you just looking because of your mobile phone and searching what their problem. Right now, choose your own personal ways to get more information about your guide. It is most important to

arrange yourself to make your knowledge are still upgrade. Let's try to choose suitable ways for you.
